

**Buehler, Michael. "Do discriminatory laws have societal origins? The diffusion of anti-Ahmadiyah regulations in Indonesia." *Politics and Religion* (2023): 1-24.**

## **Appendix 2 Methodology and Text Reuse Percentages**

I first established a corpus of documents for the subsequent text reuse analysis. 62 Anti-Ahmadiyah regulations were adopted between 1976 and 2020. I managed to obtain 43 of these regulations either in softcopy or hardcopy format. The regulations I collected in softcopy format, I converted into .docx files using PDF-to-Word conversion programs. I photographed all regulations I obtained in hardcopy format. I then extracted the text from these photographs using GoogleKeep's text extraction tool. I converted these text extraction files into .docx word files, using GoogleDoc's conversion tool. Several hardcopies were of such poor quality that the entire law had to be retyped.<sup>1</sup>

Once I had converted all Anti-Ahmadiyah regulations into .docx files, I compared the content of these regulations using WCopyfind, a dedicated plagiarism software. WCopyfind identifies identical or similar phrases between documents using a “global alignment approach.” This means that the software reports the overall percentage of text shared between two documents (Wilkerson et al. 2015: 947). This raises the question of how to isolate an “idea” and then examine whether this “idea” has travelled from one policy to another. While WCopyfind reports the overall percentage of shared text between two documents, the global alignment, the software also highlights sequences of text within two documents that are identical. This “local alignment” (Wilkerson et al. 2015: 947) consists of sequences of words that can be pre-defined. For this paper, I pre-defined a “match” between two documents as an overlap of a six-word sequence. This is the standard setting WCopyfind recommends (WCopyfind 2021: 2)

Most legal documents contain boilerplate paragraphs, such as references to God, the constitution or key legal principles. Such boilerplate paragraphs add noise to a text reuse analysis as they increase the percentage of text that matches between documents without revealing much information about the actual content that is being reused. Previous studies on the flow of policy ideas in legislation have used artificial intelligence and machine learning to teach plagiarism software how to identify and subsequently ignore such boilerplate paragraphs

(Wilkerson et al. 2015: 948). The open source software that I used for the analysis presented here does not allow for the identification and exclusion of such boilerplate paragraphs. However, the corpus of texts that I compared was small enough to identify whether boilerplate paragraphs had increased text reuse percentages between Anti-Ahmadiyah regulations. To this end, I first ran a plagiarism check using the original regulations. I then manually deleted boilerplate paragraphs from the .docx word files, and repeated the text reuse analysis. Both the spatial distribution of text reuse and the percentage of text reuse remained very similar between the two kinds of analyses. I therefore report text reuse percentages of the original Anti-Ahmadiyah regulations below.
